New type of hand-pulling mechanism

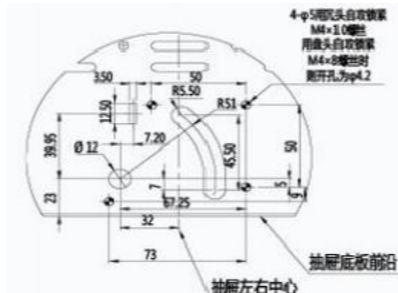

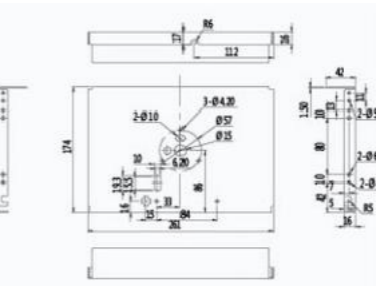

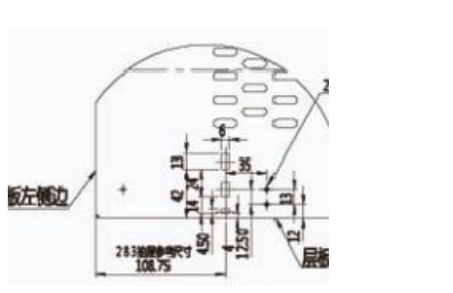

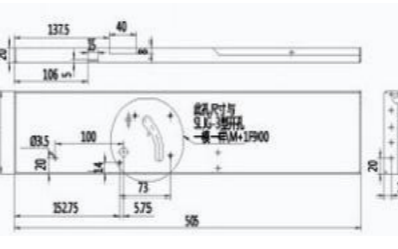

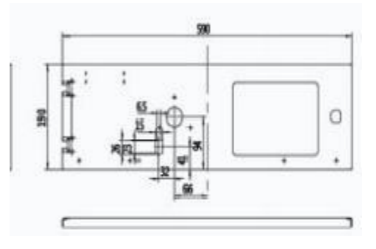

Due to the shortcomings of the original SUG-1,SLG-2 type hand pulling mechanism, such as inaccurate position indication, no isolation position, too many assembly parts, and the plastic body is not suitable for use in the environment with large temperature difference. The newly developed SUJG-3 and SUG-4 hand pulling mechanism, which took more than half a year to develop, adopts the front and rear driving mode, which improves the problem of inaccurate position indication, and adds the isolation position, and the main part is made of steel suitable for any temperature environment. And the 1/4,1/2 drawer mechanism is universal to bring convenience to selection and installation. The MBK series plastic panel and plastic panel frame developed can meet the needs of 25 modulus and 20 modulus of KB profiles, and can adapt to the height of 150,160,200 respectively. (Note: It is recommended to use the company's F-series handle)
